FOR TIMBER, PVC AND ALUMINIUM WINDOWS AND BALCONY-DOORS

Fold&Slide hardware – the new generation
Unlimited scope for architectural design, up to 130 kg

The new Fold&Slide hardware reveals solutions that combine countless benefits. As higher sash weights are permitted, fewer individual elements are required which guarantees maximum opening widths. The larger glass areas allow daylight to flood into the room thus creating an exclusive living atmosphere.

**Unrivalled running smoothness, for sash weights up to 130 kg**

The sashes are precisely and quietly guided in the grooves of the running track by ball-bearing supported, plastic-coated rolls in the bogie at the bottom and guide roll at the top. Thanks to this technically innovative combination, large and heavy Fold&Slide sashes move safely and effortlessly. This means that window elements up to 6700 mm wide with a single sash weight of up to 130 kg can be used.

**Barrier-free threshold**

With regard to the threshold, this new Fold&Slide generation offers barrier freedom as a standard solution – every Fold&Slide system can be positioned using the running track to obtain a barrier-free version (depending on the profile).

**Enhanced security**

Emphasis is placed on burglar inhibition at the Fold&Slide element (among others) where the screw connection of the sash hinges is concealed and a UNI-JET central locking system is installed at each individual sash.

**Universally usable**

Fold&Slide hardware is used in the public sector and also particularly in the private sector – e.g. to provide barrier-free access in a private apartment to a terrace or the conservatory. The open sashes can be parked to the side in a space saving manner, e.g. as an optimum solution for the transition in a restaurant from inside to outside.

Technical characteristics of the new Fold&Slide hardware system generation:

- Elements with a sash weight of up to 130 kg can be manufactured with the new GU hardware – this is ideal for even larger glass surfaces that can be safely moved with fewer sashes.
- Bottom bogie with 6 ball-bearing supported, plastic-coated rolls (and 2 more on the top guide rolls) ensure that even heavy sashes can be guided smoothly and quietly.
- Sash widths of up to 1000 mm are possible with GU hardware; large element widths of up to 6700 mm can be achieved.

- The ferGUard* silver surface sealing offers lasting corrosion protection.
- This hardware system has made it possible to implement the new Gretsch-Unitas design line systematically, which is reflected in the sash hinges and pivot rests.
- The pivot rests and sash hinges are available in the silver (-1), dark brown RAL 8022 (-5) and white (-7) surface finishes.

Innovative architectural hardware at a glance
The new generation of Fold&Slide elements

- **Guide roll at top:** 2 ball-bearing supported, plastic-coated rolls
- **Sash hinges and pivot rests:** Fully concealed screw connection; adjustable horizontal and vertical position
- **Bottom bogie:** Sash weights up to 130 kg; 6 ball-bearing supported, plastic-coated rolls
- **UNI-JET Tilt&Turn central locking system:** can be installed on individual sashes; use of standard components and UNI-JET Concealed hardware possible
- **Use of barrier-free GU system threshold possible depending on profile system, threshold height 20 mm**

Safety and convenience during operation of all sash sizes!
Quiet and effortless movement of large and heavy sashes!
Increased burglar inhibition & optimum installation conditions!
Increased burglar inhibition & reduced warehouse overheads!

Suitable for barrier-free construction in compliance with DIN 18040
Safety and convenience
Intelligent architectural hardware and burglar inhibition in harmony

Unique combination of bogie and guide rolls

The new generation of Fold&Slide hardware with a permissible sash weight of 130 kg can reach element widths of up to 6700 mm. More glass can be incorporated in window elements with large sash widths of up to 1000 mm which allows light to flood into rooms.

Once opened, the sashes can be easily and conveniently moved to the side and parked. This allows unrestricted use of the internal living space and outdoor terrace space and also blurs the boundaries between the two.

Six plastic-coated, ball-bearing supported rolls mounted in each bottom bogie guide the sash precisely and quietly in the three grooves of the running track. The guide rolls at the top of the sash also feature two ball bearing supported plastic-coated rolls. Thanks to this unique combination, even large and heavy Fold&Slide elements can be moved safely and effortlessly.

A brush seal seals the guide track on the floor which prevents dirt entering the running track.

Increased burglar inhibition

The screw connection of the sash hinges provides increased burglar inhibition and is elegantly concealed by metal cover caps. These caps can only be removed when the sash is in the open position.

- Horizontal adjustment range: +1.5 / -5.0 mm
- Vertical adjustment range: +2.0 / -2.0 mm

The GU sash hinges can for the first time be adjusted in two dimensions, horizontally and now also vertically.

The central locking system which can be installed on each individual sash is another way to optimise burglar inhibition. The sashes are also locked into the threshold at the bottom.

The optionally available opening and locked status monitoring satisfies more stringent security requirements. If the magnetic field that forms the connection between the components under surveillance is interrupted, this is signalled via the alarm control unit.
Barrier-free living
Space for unlimited possibilities

Barrier-free construction in accordance with DIN 18040

The meaning of ‘barrier freedom’ in the true sense goes far beyond the notion of making public and private rooms accessible to persons with physical limitations e.g. making public and private spaces available to wheelchair users so they can access these independently without the assistance of others. In fact, it also defines situations that suddenly arise and can frequently be encountered by anybody in everyday life in which personal mobility is restricted by the specific situation. This could be a person with a pushchair, or an injured sports person on crutches or someone travelling with heavy bulky luggage.

Barrier-free construction increases safety and added convenience for everyone: irrespective of age and health, the usefulness of a building and therefore quality of life is significantly improved. This makes barrier-free construction not only a social responsibility, it also makes a significant contribution towards safeguarding the future of a building and thus protecting the investment in the long term. Barrier-freedom is becoming a basic requirement to be met by a building and products that satisfy these requirements will achieve commercial success.

Our new Fold&Slide hardware system satisfies these requirements in every respect and is even available as a standard solution: each Fold&Slide system can have a barrier-free design (depending on the profile) without requiring additional components such as a special threshold.

The flat GU system threshold can provide a maximum passage width without obstructions. Frame parts that anchor the sash to the floor do not represent a tripping hazard by projecting out of the floor when the sashes are parked at the side and instead recessed in the threshold in the floor.

Even heavy large sashes can be effortlessly opened and moved safely and to the side thanks to ball-bearing supported, plastic-coated rolls in the bottom bogie and the top guide roll. Not only older persons or persons with restricted mobility appreciate this, but also service employees in the gastronomy industry for example, who value fast, short and obstruction-free routes in the outdoor area of the restaurant.

Even heavy large sashes can be pushed effortlessly and safely to one side in order to achieve the maximum obstruction-free passage width

A threshold which is easy for wheelchair users or persons with restricted mobility to negotiate without obstructions, e.g. upwards projecting frame parts that anchor the sash to the floor
Central locking system

The central locking components required for the elements come from the successful UNI-JET Tilt&Turn hardware range. In this case, face-fixed or even fully concealed stay bearings and pivot rests can be used. All locking points feature automatic cams which provide ingenious clearance compensation.

The different climatic conditions in the summer and winter frequently lead to changes in the locking cam settings. The self-adjusting CleverLe locking cam automatically adjusts clearance tolerances, thus the adjusting effort during production or on site is minimized. This significantly reduces the need for adjustment during fabrication and thereafter.

By using standard components, this significantly reduces the inventory costs of fabricators of timber, PVC or aluminium window elements.

Pivot rest

The pivot rests are accurately and securely fixed to the sash using 3 supporting bolts at 3 screw fixing points. The sash hinges are equipped with infinitely adjustable bearing pins and are therefore ideal for adjusting the sash to suit a wide range of profile systems.

In addition to the wide horizontal adjustment range, large vertical adjustment is now possible for the first time.

Vertical adjustment range  + 3.5 / - 1.0 mm

A scale helps make these adjustments quickly and precisely which is a huge advantage with existing elements in projects.

The sash hinges and pivot rests are suitable for all profile systems with overlap heights between 15 and 26 mm – packers are not required!

Once installed, metal cover caps are fitted on the sash hinges and are extremely easy to remove again in order to make adjustments at the open element.
